### **ACKNOWLEDGMENT**

This publication summarizes basic information concerning Florida's poultry industry. It is intended for the use of poultymen, allied industries and all others who are interested in poultry production.

Many producers, hatcherymen, marketing agencies and others voluntarily supplied information used to develop these statistics. Their cooperation is sincerely appreciated.

This report is made possible through a cooperative effort of the Florida Crop and Livestock Reporting Service, The Bureau of Market News and the Poultry and Egg Section of the Division of Inspection. Production and inventory data are official state and USDA statistics prepared by the Florida Crop and Livestock Reporting Service.

This publication was prepared under the direction of Edward C. James, Jr. of the Florida Crop and Livestock Reporting Service.

## POULTRY AND EGG SUMMARY

Florida poultrymen received 187.3 million dollars for broilers, eggs, and other poultry products in 1978. This is an increase of 1 percent from the 1977 cash receipts of 184.6 million dollars. Receipts from commercial sales of eggs, at 105.0 million dollars, were down 8 percent. Producers of broilers received 79.0 million dollars, about 19 percent more than 1977. Cash receipts for other poultry products amounted to 3.3 million dollars compared with 3.9 million dollars in 1977.

In 1978, eggs returned producers an average of 42.7 cents per dozen, down 3.2 cents from the previous year. Broiler prices averaged 24.8 cents per pound, liveweight basis, compared with 22.4 cents in 1977.

The annual average number of Florida layers peaked in 1971 after a long period of growth. During the following

years, layers declined, stabilized, and then increased. Layers reached a record 12,633,000 in 1977, 3 percent above the 1971 peak. In 1978, number of layers declined to 12,305,000, 3 percent below 1977.

The daily rate of lay per 100 layers in 1978 was 65.8 eggs, up 1 percent from a year earlier. The 2,954 million eggs produced in 1978 were 1 percent below the record production of 2,998 million in 1977 but the second highest of record.

During 1978 commercial hatcheries produced 134.7 million straight run chicks. Broiler-type chicks at 96.7 million accounted for 72 percent of the total, with egg-type chicks making up the remaining portion. Broiler-type chicks hatched were up 6 percent. Egg-type hatch at 38.0 million was down 4 percent.

### TERMS AND DEFINITIONS

**MARKETING YEAR**—Poultry production, price and value statistics since 1970, are for the marketing year beginning December 1 through November 30. All statistics prior to 1970 are on a calendar year basis. For comparability, in those tables where monthly data are shown, December entries always refer to the preceding year. All hatch and hatchery placement data are reported on a calendar year basis.

**BROILERS** are meat-type chickens raised commercially and usually marketed in 7 - 8 weeks.

**EGGS** include both table and hatching eggs. Table egg prices are calculated on a farm basis, cases exchanged. They include all grades and sizes, but exclude charges for hauling, grading or packaging. Prices for hatching eggs are not published separately. Annual egg production, price and value statistics are for table and hatching eggs combined.

**OTHER POULTRY** cash receipts include chickens other than broilers, turkeys and miscellaneous farm poultry products.

**CASH RECEIPTS** are the returns received by farmers for all sales.

**GROSS INCOME** includes cash receipts plus the value of home consumption.

**CURRENT YEAR** data are preliminary and subject to revision.

**SURVEY METHODOLOGY**—Monthly estimates of hens and pullets of laying age, pullets not yet of laying age, and of egg production are based upon data obtained from a sample of commercial chicken and egg producers. This sample is selected from the universe of Florida poultry management units, and includes approximately 80 percent of the total commercial laying flock. Monthly estimates are expected to be within five percent of the value obtained if a complete enumeration were undertaken each month.

During December of each year all known commercial egg producers in Florida are contacted. This complete enumeration establishes the annual universe of management units. Management units include all independent producers as well as contractors who report for all contractees. The table below shows the stratification of the universe established by the annual survey of December 1978 and the number of units in the sample selected for the monthly survey in the first half of 1979.

### NUMBER OF MANAGEMENT UNITS IN THE UNIVERSE, DECEMBER 1978, AND SAMPLE, 1979

STRATUM	STRATUM BOUNDARIES		NUMBER OF UNITS	
			UNIVERSE DEC. 1, 1978	SAMPLE DEC. 1978-MAY 1979
